

Floorbox Coverplate Kit Two-Gang, Flip-Door Style With Divider

AI CAT. #
 FLB5552MB (BRASS)
 FLB5552NL (NICKEL)

WARNING: Make sure power is OFF at main panel box before installing.

INSTALLATION INSTRUCTIONS

1. Cut electrical box into subfloor/finished floor, avoiding floor joists. For finish floor thickness greater than 1/2" thick, box will need to be routed so the outside mounting tabs are 1/4"-1/2" recessed into finished floor. Adjust outside mounting tabs on electrical box so that receptacle mounting tabs are recessed approximately 1/4"
2. Ensure that receptacle mounting location is clear of any subfloor/flooring material so #6-32 screws can extend past floor surface
3. Install appropriate fitting & pull cable
4. Secure electrical box with four screws through outside tabs. (screws not provided)
5. When attaching box to sub-floor, finish floor surface should be brought up to long sides of electrical box and within a 1/2" of mounting ears on short sides of box. **IMPORTANT:** Finished floor surface must cover outside tabs by a minimum of 1/4"
6. Wire receptacle and low-voltage bracket in accordance with National (NEC/CEC), state/province, and local codes
7. Attach gasket support plates to receptacle and low-voltage bracket with #6-32 x 1/2" long screws.
8. Place gaskets on top of gasket support plates.
9. Install coverplate using four #6-32 x 1-3/16 long screws.
