

# 4K Penta-brid HDCVI DVR

16-Channel 2U Digital Video Recorder with Analytics+

#### System Overview

The X88A Series HDCVI DVR offers 4K recording on each HDCVI channel and a host of advanced features and functions. The X88A takes advantage of HDCVI technology for easy integration into existing video surveillance systems while leveraging existing networks, cabling, and cameras. Penta-brid access technology seamlessly records video from HDCVI, AHD, TVI, CVBS, and IP sources simultaneously, plus the DVR delivers 4K resolution on each HDCVI or IP channel.

The Dahua Analytics+ algorithms significantly improve accuracy and reliability, as compared to standard intelligent features. The recorder offers advanced perimeter protection that distinguishes between human and vehicular violations, and real-time Facial Recognition with metadata that captures a person's gender, age, and if the person is wearing glasses or a mask. This recorder is the ideal solution for actively monitoring public venues, retail stores, transportation hubs and access ways, personal property and homes, and educational institutions.

#### Functions

#### Perimeter Protection

Dahua Analytics+ includes Tripwire and Intrusion functions that offer custom tripwires based on object type for automation in limited access areas. Perimeter Protection requires less pixels to detect an object to deliver improved accuracy and decreased false alarms due to lights, weather, trees, or animals.

#### Real-time Face Recognition

Analytics+ performs real-time facial recognition on up to four (4) streaming video channels simultaneously. The server captures and analyzes facial features to determine gender, age, expression, glasses, moustache, and mask, and then can record the faces and store the associated structured data. The server also filters incoming video to display faces that match target features.

#### Face Database Management

In addition to storing 100,000 facial images, the NVR database also stores names, genders, birthdays, nationality, address, and ID information associated with each facial image. The NVR also offers powerful and configurable database management features that can be applied to each face recognition channel independently.

- 4K at 7 fps Recording Resolution on All HDCVI Channels
- Dual-stream Video Recording
- Smart H.265+ and Smart H.264+ Dual Codecs
- Auto-detection and Auto-configuration of Video Inputs
- 16+48 IP Camera Channels, each channel up to 12 MP
- Maximum 256 Mbps Incoming Bandwidth
- Supports RAID 0, 1, 5, 6, 10
- Analytics+ Functions: Face Recognition and Perimeter Protection
- Spot Output (HDMI 2 Output)
- Five-year Warranty\*

#### Stranger Mode

The NVR supports two facial detection modes: Common and Stranger. In Stranger mode, when the NVR detects a face not stored in the device's database, it can trigger an alarm, a buzzer, take a snapshot, or initiate recording. It also incorporates a Similarity Threshold, where the server triggers an alarm for a face that does not match a minimum recognition level. The Stranger Mode and the Similarity Threshold are designed for critical infrastructure sites where access control is of vital importance.

#### Efficient Search

The NVR searches images by facial features to improve search efficiency. The server support uploading and storing 20,000 facial images for comparison with recorded faces. This search capability allows operators to quickly and easily search multiple channel recordings to determine when and where a person of interest appeared in a recording.

#### 4K Resolution

The HDCVI DVR records 4K resolution on each HDCVI and IP channel. 4K is a revolutionary breakthrough in image processing technology. 4K delivers four times the resolution of standard HDTV 1080p cameras and offers superior picture quality and image details. 4K resolution improves the clarity of a magnified scene to view or record crisp forensic video from large areas.

#### Smart H.265+

Smart H.265+ is the optimized implementation of the H.265 codec that uses a scene-adaptive encoding strategy, dynamic GOP, dynamic ROI, flexible multi-frame reference structure and intelligent noise reduction to deliver high-quality video without straining the network. Smart H.265+ technology reduces bit rate and storage requirements by up to 90% when compared to the H.264 video compression standard.

#### HDCVI/AHD/TVI/CVBS Auto-detect

The HDCVI DVR automatically recognizes the incoming signals of each attached camera without any setup, making installation easy and operation convenient.

#### Spot Output

The HDCVI DVR provides a spot output channel for a secondary monitor. This monitor allows the operator to view one monitor that is assigned to selected cameras or video inputs from high-security areas.

# Ultra Series | X88A3S Series

Technical S	pecification
