C2P Integration with DW Spectrum® IPVMS

The C2P™ (Convergence to Pixel®) solution is used to normalize all TCP/IP metadata received at the edge of the network into a common integration framework. The integration framework provides the user with a common set of both real-time and forensic analysis tools that are common to all TCP/IP device integrations. Interfaces include POS, RFID, Access Control, LPR, ATM, Weigh Scales, Bar Code Readers, Biometrics Security, PLC Controllers.

How does C2P integration works?

Adding the Blackjack® C2P™ workstation and licenses to your existing DW Spectrum IPVMS solution allows you to bring C2P's 3rd party partners to your solution.

Blackjack® C2P

Servers Powered by DW Spectrum® IPVMS

The Blackjack® C2P™ server is a dedicated station to facilitate the integration of DW Spectrum® IPVMS with C2P™ products.

The server brings metadata from any TCP/IP enabled device seamlessly into DW Spectrum®. By normalizing all metadata at the edge of the network, the DW Spectrum® Client can become the head-end for monitoring all TCP/IP connected sensors and devices, while also ensuring all metadata is stored time synchronized with the DW Spectrum® video.

DW Spectrum® IPVMS licenses must be purchased separately from the server. See last page for details.
