

# Network Video Recorder Quick Start Guide

## 1. Notes

- Please read this instruction carefully before using the product and keep it for further reference.
- All the examples and pictures used here are for reference only.
- The contents of this manual are subject to change without notice.
- This device should be operated only from the type of power source indicated on the marking label. The voltage of the power must be verified before using the same.

## 2. Packing Check

Please check the device and the accessories after getting the device. If there are any damages, shortages or defects, please contact your dealer immediately.

## 3. HDD Installation

This series of the product supports 8 SATA hard drives. The pictures of the installation are only for reference, please take the real object as the standard. Please make sure that the device is powered off before the installation.

- ① Remove the cover and loosen the screws to take out two mounting bars.
- ② Get ready the HDDs installed and fix the HDDs on the mounting bar ( For installing the HDDs well, please fix the round screw holes first ).

- ③ Install the two mounting bars with HDDs back to the device ( It is recommended to install the copper-pillar provided in case the HDDs are damaged by external forces ).
- ④ Connect the power and data cables.

- ⑤ Install back the cover and secure it with the screws.

Tips: Please check the inside structure of the device and make sure the cables connected well before installing the cover back.

## 4. Rear Panel Instruction

The interfaces of the rear panels are for reference only.

Name	Description
PoE Ports	PoE network ports; connect to PoE IP camera
VGA	Connect to monitor
e-SATA	Connect to HDD with e-SATA interface
LAN	Network port
HDMI	Connect to high definition display device
USB	Connect to USB storage device or USB mouse
P/Z	P/Z; Connector for PTZ
K/B	K/B; Connector for keyboard
ALARM IN	Alarm input for connecting sensor
ALARM OUT	Relay output; connect to external alarm
GND	Ground
AUDIO OUT	Audio output
AUDIO IN	Audio input

## 5. Startup & Shutdown

### ▶ Startup

- ① Connect the monitor and the power.
- ② The device will boot and the power indicator will display blue.
- ③ A wizard window will pop up.

### ▶ Shutdown

Click “Start” and then select “Shutdown” icon. This will bring up a shutdown window. The device will shut down by clicking “OK” button. Then disconnect the power.

## 6. Login

The default username is **admin** and the default password is **123456**. You must configure the wizard if you start the NVR for the first time and you may change the password when you configure the wizard for the first time. You can skip the settings of wizard next time. Click “Start” and select “Login”. This will take you to see a login box. Enter default username and password you set and you can see the live image.

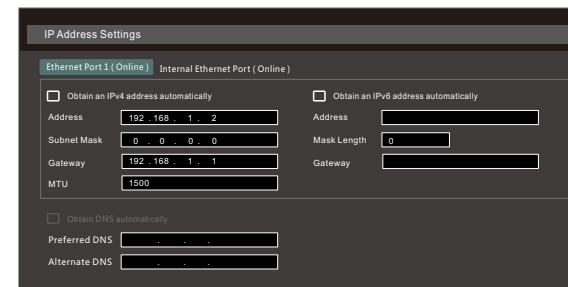

## 7. Network Configuration & Add IP Camera

After you finish adding IP cameras, you can see the live images through the monitor of the NVR. The following will mainly introduce how to add the IP cameras via LAN/WAN.

### ▶ LAN

- ① Set the network of the NVR. Go to Start → Settings → Network → TCP/IP. Enter IP address, subnet mask, gateway, etc. If using DHCP, please enable DHCP in both the NVR and the router.
- ② Go to Start → Settings → Network → Port. Enter HTTP port (the default value is 80), server port (the default port is 6036).
- ③ The internal ethernet port is the port which connects all the PoE ports with the NVR system. The PoE ports are available if the internal ethernet port is online; if it is offline, all the PoE ports will be unavailable. The IP address and subnet mask of the internal ethernet port can be changed to make the port in the same network segment with the IP cameras which directly connect to the PoE ports of the NVR.

- ④ Go to Start → Settings → Camera → Add Camera. The NVR will automatically refresh the cameras searched. The IPC which supports the Onvif protocol may be added manually. If the IPC searched is not in the same local network as the NVR, you should select the device and click  to modify the IP address.

⑤ Checkmark the device you want to add and then click “Add” button. The NVR will automatically refresh the cameras and return to “Edit Camera” interface. “Online” status means connecting the device successfully and you will see the live image. You may select the added device and click  button to modify channel, IP address, etc.

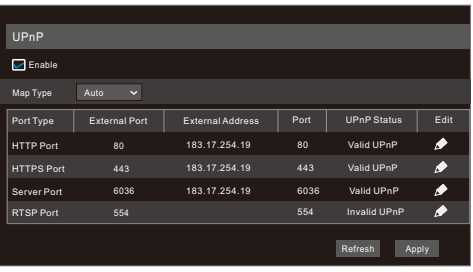

**► WAN**

- ① Set the network of the NVR. Go to Start → Settings → Network → PPPoE. Enable PPPoE and then enter the user name and password received from your ISP.
- ② Go to Start → Settings → Camera. Click “Add Camera” or  behind the column of the search camera and select “Manually Add” to add the IP cameras. Enter IP address, server port, username and password of the IP camera. The IP camera must be connected over WAN. And here the IP address of the IP camera must be a WAN IP address.

**8. UPnP**

You can use the UPnP function to enable the fast connection of the device to WAN via a router without port mapping.

- ① Go to Start → Settings → Network → UPnP, and enable UPnP and then click “Apply” button to save.
- ② Enable the UPnP function in the router.
- ③ Click “Refresh” button to refresh the UPnP status. If the UPnP status were still “Invalid UPnP” after refreshing it for several times, the port would be wrong. Please change the mapping type to “Manual” and then click  to modify the port until the UPnP status turns to “valid UPnP”.

**9. NAT**

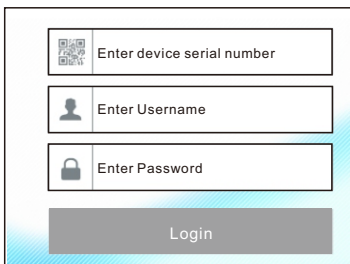

**► NAT Settings**

- ① The NVR shall be powered on and connected to the network.
- ② Go to Start → Settings → Network → TCP/IP. You can obtain the IP address, subnet mask and gateway automatically. You can also manually enter them according to the actual network situation. Please make sure the network segment is the same as that of the network which is used.
- ③ Set the preferred or alternative DNS Server. Click “Apply” to save the parameters.
- ④ Go to Start → Settings → Network → NAT tab. Enable NAT and select the NAT Server Address (The default NAT Server Address is *nat.autonat.com*). Click “Apply” to save the parameters.

**► NAT Access**

After finishing the NAT settings, you can enter *www.autonat.com* in the address bar of your browser and then press enter to go to the following interface. If you are the first time to access the NAT, you shall download and install the ActiveX according to the popup tips. After installing ActiveX successfully, it will pop the login box.

**Device Serial Number:** Click  on the menu bar at the bottom of the live interface to check the serial number or go to Start → Settings → Network → Network Status to check the serial number of the NVR).  
**Username:** The username of the NVR. The default username is admin.  
**Password:** The password of the NVR. The password is set by yourself when you configure the wizard for the first time.

**10. Manual Recording**

Before recording, please install and format a HDD. In the live interface you can see the menu toolbar. Click  button to start recording. Click it again to stop recording. You can also click  to check the status of the recording.

**11. Playback**

**► Instant playback**

Click “Instant Playback” in the right-click menu of the camera’s preview window to select or drag the playback progress bar to change the playback time to play back the record.

**► General playback**

Click  on the tool bar at the bottom of the live preview interface or click Start → Playback to go to the playback interface as shown below. You can also add the playback cameras manually. Click  in the playback window to pop up the “Add Camera” window. Check the cameras in the window and then click “Add” to add playback camera. The record files of the added playback camera will be played in the playback interface.
