

Starter

Access Control Kits

Kantech's Access Control Kits include the essentials needed to get up and running quickly and easily. Available in different configurations depending on number of doors, the kits are an ideal way to experience the value that Kantech brings to an integrated security solution. Kantech's starter kits include the essential parts needed to create a complete (two or four-door) access control solution. These kits include everything from the powerful EntraPass security management software and KT-300 or KT-400 door controllers to the peripherals in between.

"Affordable, easy to implement access control"

Access Control Kits

Our access control expansion kits make adding doors to your network easy. These kits come with a variety of options including door controllers, proximity readers and TCP/IP interfaces to suit your application needs. Other items and options from Kantech's product line - including EntraPass software - may be added to complete and enhance the system. You can add as many doors as you need. See the chart below to choose the kit that's right for you.

"Easily add doors to your network"
