

Please see last page for supporting documentation for this product(certificates, CAD files & drawings, IES files, wiring diagrams, etc).

**LED-A19-10-E26-V2-5600K-1227 12 Watt Small Form LED Bulb**

**Lamp Type:** LED

**Watts:** 12

**Lumens:** 1040

**Dimensions:** 3.15" Outside Diameter, 5.51"H

**Voltage:** 85-277V AC

**Color:** White - 5600K

**CRI:** 80 (White)

**Dimmable:**NO

**Operating Temp:** -20°C to +65°C

**Materials:** Aluminum Housing - Polycarbonate Lens

**Ratings/Approvals:**

UL Listed

Up to 30,000 Hour Life Rating

Direct Replacement for A19 Bulbs

Rough service

**Special Orders- Requirements**

Contact us for special requirements

**Toll Free:** 1-800-369-6671

**Intl:** 1-903-270-1187

**The Larson Electronics LED-A19-10-E26-V2-5600K-1227 Omni-Directional 12 Watt LED A19 Style Bulb is designed to fit in standard light bulb sockets and provides increased durability and rough service over fragile incandescent lamps. Using a tenth of the electrical current of standard 100 watt rough service lamps, this 10 watt LED bulb ideal for industrial and commercial applications that require small form factor replacement lamps. The LED-A19-10-E26-V2-5600K-1227 produces 1040 lumens of white LED light and operates on 85-277V AC voltages.**

The LED-A19-10-E26-V2-5600K-1227 is an omni-directional LED light bulb that can serve as an A19 LED upgrade from standard service light bulbs fitting E26 bulb sockets. Utilizing only 12 Watts and designed to operate with 85-277V AC for high voltage, this lamp provides higher efficiency than traditional incandescent A19 bulbs and is a direct fit replacement. The A19 is the same base and dimensions as a standard A19 incandescent and compact fluoresceent light bulbs, meaning you can use this LED light bulb as a replacement for a standard household lamps. However, given the durability and longevity of this LED design, we see this LED light bulb as an ideal solution for a variety of business and industrial uses.

This lamp has an acceptable operating temperature range of -20°C to +65°C and an operational life of 10,000 hours when the bulb is used in an enclosed fixture and 30,000 hours when the bulb is used in a non-enclosed fashion. The solid state

design of this lamp means it is resistant to the effects of impacts and vibrations, providing added durability to withstand conditions that would cause a normal incandescent bulb to fail. The overall dimensions of this LED light are the same as a standard A19 incandescent lamp, making this a direct replacement for currently installed bulbs. The base of this LED lamp is constructed of aluminum and is fitted with a shatter resistant polycarbonate dome, adding for durability and resistance to rust and corrosion.

**LED Benefits:** Unlike gas burning and arc type lamps that have glass bulbs, LEDs have no filaments or fragile housings to break during operation and/or transportation. Instead of heating a small filament or using a combination of gases to produce light, light emitting diodes (LEDs) use semi-conductive materials that illuminate when electric current is applied, providing instant illumination with no warm up or cool down time before re-striking. Because there is no warm up period, this light can be cycled on and off with no reduction in lamp life. LED lights run at significantly cooler temperatures than traditional metal halide and high pressure sodium lights and contain no harmful gases, vapors, or mercury, making them both safer and more energy efficient. No extra energy is wasted in cooling enclosed work areas due to external heat emissions from bulb type lights, and the operator risks associated with traditional lighting methods, such as accidental burns and exposure to hazardous substances contained in the glass bulbs, are eliminated. In addition, LEDs are also safer for the environment as they are 100% recyclable, which eliminates the need for costly special disposal services required with traditional gas burning and arc type lamps.

The LED-A19-10-E26-V2-5600K-1227 is the ideal upgrade and/or replacement for omni-directional hand lamps and drop lights like our EPL-120 series explosion proof hand lamps. This bulb produces nearly 3 times the foot candles at 5' than of a standard 100 watt rough service bulb. This LED lamp is offered in a cool white 5600K color temperature. The high output and color options, this bulb is ideal for improving the light output of hand lamps, drop lights, and other standard incandescent lighting within industrial applications.

The E26 base is the same screw in base that the standard light bulb in the US and Europe. You can use this LED light bulb in a standard lamp in your home. However, given the durability and longevity, we also see this LED light bulb as an ideal solution for sealed hand lamps and drop lights that usually involve replace seals, gaskets, etc. when relamping. As such, this LED light bulb can provide additional safety measures and time savings, given the low heat production and that it does not require replacing for between 10,000 and 30,000 hours depending on whether or not the bulb is enclosed or non-enclosed. Since the LED bulb uses solid state technology, the vibration (dropping, etc.) that degrades conventional incandescent bulbs is not an issue with these LED bulbs.

At Larson Electronics, we do more than meet your lighting needs. We also provide replacement, retrofit, and upgrade parts as well as industrial grade power accessories. Our craftsmen can custom build any lighting system and/or accessories to fit the unique demands of your operation. A commitment to honesty, quality, and dependability has made Larson Electronics a leader in the lighting and electronics business since 1973. Contact us today at 800-369-6671 or message [sales@larsonelectronics.com](mailto:sales@larsonelectronics.com) for more information about our custom options tailored to meet your specific industry needs.
