BOSCH
Invented for life

- ▶ Used for batteries in parallel
- ▶ Slide-on connectors
- ▶ Built-in circuit breaker protection

The D122 Dual battery harness protects the installer and battery when connecting two batteries, in parallel, to compatible control panels. The D122 eliminates the hazards of batteries connected in parallel by utilizing a thermal circuit breaker to govern the circuit. It breaks the electrical circuit of the second battery when the thermal rating is exceeded.
